About this test:

This report provides feedback about the test you recently completed. You will see the results for the test, expressed both as a percentage and as a sten.

Comparison group:

To gain a full understanding of your performance on the test, your test score has been compared to that of a large group of individuals who have taken these tests in the past. This is known as a comparison group.

Interpreting stens:

- Sten 1: stronger preference than about 1% of the comparison group
- Sten 2: stronger preference than about 5% of the comparison group
- Sten 3: stronger preference than about 10% of the comparison group
- Sten 4: stronger preference than about 25% of the comparison group
- Sten 5: stronger preference than about 40% of the comparison group
- Sten 6: stronger preference than about 60% of the comparison group
- Sten 7: stronger preference than about 75% of the comparison group
- Sten 8: stronger preference than about 90% of the comparison group
- Sten 9: stronger preference than about 95% of the comparison group
- Sten 10: stronger preference than about 99% of the comparison group

Interpreting colour bands:

Your performance for the overall test and specific levels are categorised into 5 colour bands to indicate your level to the comparison group.

- | | | |
|---|---------------|---|
|  | High | Excellent Skills and a strong performance in this area. |
|  | Above Average | Good skills, but some areas that can be improved. |
|  | Average | Reasonable skills and likely to improve with further development. |
|  | Below Average | Need additional support and training in this area. |
|  | Low | Need to learn and develop skills in this area. |

Error Checking Test:

This test comprises of questions which look at Error Checking, providing results in 4 areas:

Overall Score: Shows how well you performed on the assessment.

Errors of Commission: Occurs where the candidate has incorrectly identified a piece of information as being necessary, when it is not. A high score indicates that the candidate incorrectly identified fewer items.

Errors of Omission: Occurs where the candidate fails to identify a piece of information as being necessary. A high score here indicates that the candidate omitted fewer correct items. There is a very slight negative correlation between the two sorts of error. In practice, it appears that candidates tend to make one sort of error or the other, and few make large numbers of both kinds of error.

Caution: Provides an insight to the balance candidates strike between the different kinds of risk. A higher score indicates that the individual tends to prefer to avoid risk, wanting to be certain of an answer before giving it whereas a lower score indicates that the individual may prefer to give an answer, or make a decision, without being sure of all the facts. In certain environments, risk taking style might be of particular interest in terms of the job being performed.

Your sten scores will be presented on a 1-10 scale. This scale is colour coded to represent how the sten scores relate to the 1-5 colour bands.

This test assesses your ability to identify problems and determine probable causes. People who perform well on this test tend to be comfortable with interpreting coded information and are more likely to have strong attention to detail.

Your Results:

Overall Score:

Errors of Commission:

Errors of Omission:
